Tractor Fluid

PRODUCT CODE
2069**PACK SIZES**
205L, 20L, 4L**DESCRIPTION**

Multi-functional tractor hydraulic fluid (THF) for use in transmissions, final drives and hydraulic systems of modern farm and industrial wheel and crawler tractors and off-road equipment where fluids meeting API GL-4 and major THF specifications are recommended.

APPLICATIONS

- Automotive manual transmissions and gearboxes.
- Where tractor manufacturers specify the use of a THF or UTTO type product.
- Mixed fleets of agricultural tractors and associated off-road equipment.
- Enclosed oil immersed (wet) brakes.
- Power take off (PTO) clutches.
- Mobile hydraulic systems.

Not for use as an engine crankcase lubricant

BENEFITS**Saves on maintenance**

Highly refined base oils and oxidation inhibitors provide thermal and oxidation stability, providing resistance to formation of lacquer, deposits and corrosive oil degradation by-products. Viscosity characteristics at low temperature promotes rapid oil circulation on start-up, preventing wear.

Smooth and quiet operation

Friction modifier allows smooth action of the wet brakes and power take off clutches minimising chatter, stick slip and squawk and promotes good brake efficiency.

Longer oil life

Oxidation stability protects against formation of gums and varnishes, reducing oil thickening and increasing oil life.

Maximises transmission life

Shear stable formulation maintains film thickness under severe transmission and hydraulic system operation, protecting components against scuffing and wear. Anti-wear additive reduces wear by forming a protective layer on metal surfaces under high load conditions.

PERFORMANCE STANDARDS

Recommended for applications where any of the following are called for:

- API GL-4
- John Deere J20C
- Massey Ferguson M1143, M1135
- (former) Ford New Holland M2C134-D
- Volvo 97303 (VME WB 101)
- ZF TE-ML 03E (transmissions for off-road equip)
TE-ML 05F (axles for off-road equipment)
TE-ML 06K (tractor transmissions, hydraulic lifts)
